Table 1. Shows Opportunistic Sighting data recorded from January 2016 until December 2016

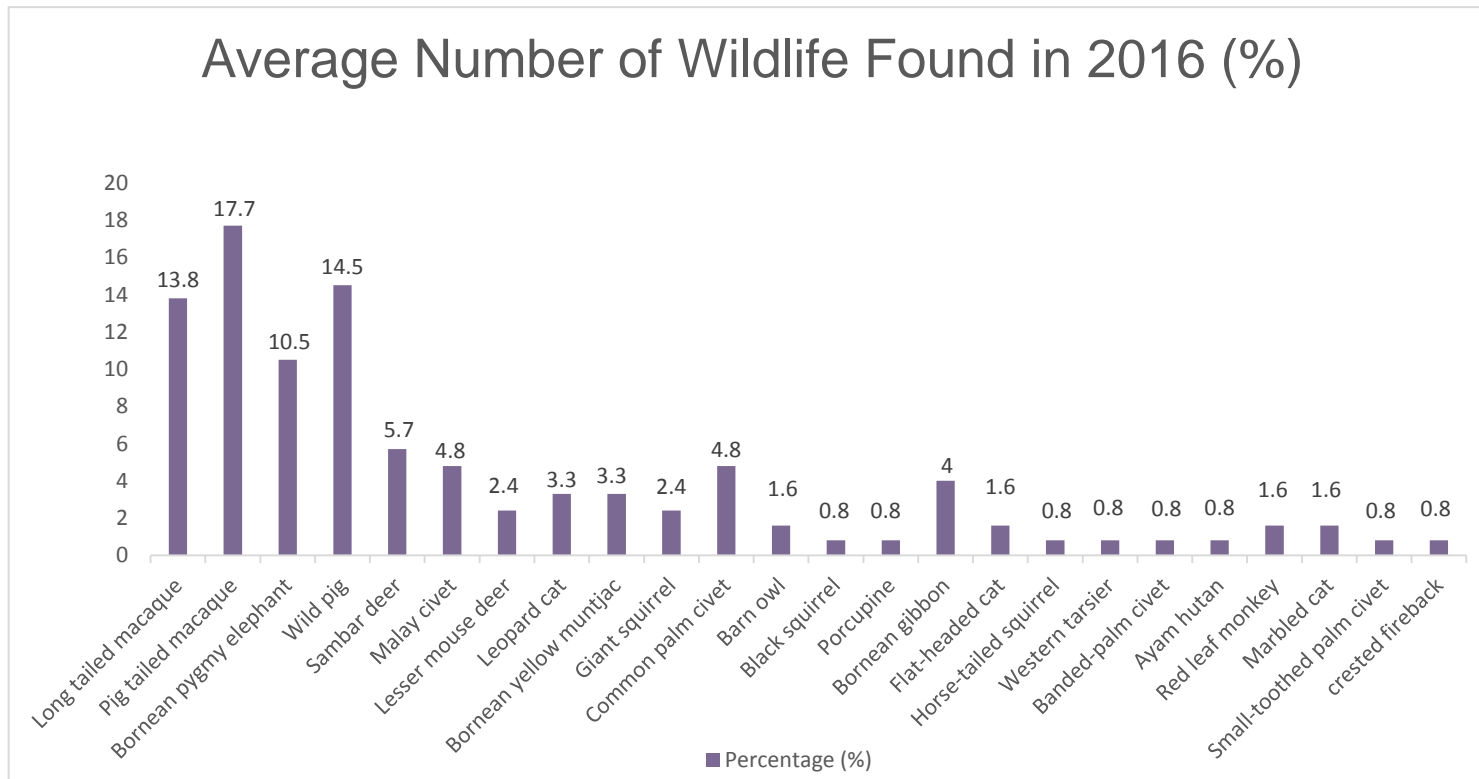

Figure 1. Graph shows Opportunistic Sighting data/results from January 2016 until December 2016

From Figure 1, it is shown that Pig-tailed Macaque was mostly found compare to other wildlife species in forest reserve areas. Three species that categorised as endangered species; Bornean pygmy elephant, Common palm civet and Bornean gibbon were also found during data collection. These data recorded during wildlife monitoring, patrolling other activities within forest reserve areas.
